

Document Version: 1.5

## Pin Description:

definition	Type	Function
nINT/YDI	DI/ DO	Interrupt input (active low)/Valid data indicator
VDD	S	Positive power supply
SDI	DI	SPI data input
SCK	DI	SPI clock input
nSEL	DI	Chip select (active low)
SDO	DO	Serial data output with bus hold
nIRQ	DO	Interrupts request output (active low)
FSK/DATA/nFFS	DI/DO/DI	Transmit FSK data input/ Received data output (FIFO not used)/ FIFO select
DCLK/CFIL/FFIT	DO/AIO/DO	Clock output (no FIFO )/ external filter capacitor(analog mode)/ FIFO interrupts(active high)when FIFO level set to 1, FIFO empty interruption can be achieved
CLK	DO	Clock output for external microcontroller
nRES	DIO	Reset output (active low)
GND	S	Power ground

Package Size:
